

## Selected Case Studies

Client	OGRE, Dallas, TX
Project	Design and development of Asset Management of software for petroleum companies
Business Challenge	Enhance complex product build using cutting edge technologies (completely Object Oriented including OO database & 1600+ Java classes) Reduce the cost of product maintenance/enhancement Build flexibility in ramping resources
Our Solution	Create an offshore delivery team for product maintenance and enhancement Transfer knowledge onsite/ replicate technical environment offshore Build XML based data interface modules Enhance system documentation Support bug fix from offshore center
Technology used	J2EE, XML Java Swing Tomcat, Linux
Value Delivered	Significantly reduced cost of product maintenance and enhancement without any compromise on quality and responsiveness Freed limited client resources to focus on “core” domain related product modules
Relevance to OGRE	We can maintain and enhance complex software products from our offshore center We can stretch your product budgets You can rapidly ramp-up resources required for enhancements
